● Endermologie introduces Lipomassage 2011 & introduction of new skincare range

Lipomassage by Endermologie presents a proven non-aggressive technique with a proven ability to reactivate fat cells and increase lipolysis (elimination of fat). The result is a non-invasive and non-aggressive fat elimination treatment that smoothes cellulite and re-sculpts the figure naturally by using massage techniques, offering results with no negative side effects. After six sessions visible results claim to be achieved: resistant fat is eliminated, curves are resculpted, cellulite is smoothed away and skin is firmer.

Endermologie offers targeted solutions to suit individual requirements with a choice of eight new treatments utilising the following techniques: Expert Lipomassage, Endermo Detox and Endermo-Draining. Prices start from £60.00 per session.

In conjunction with these new professional treatments, LPG Endermologie is also introducing its first line of skincare products, **Soins Techniques LPG**, to maximise and enhance results. These formulas, containing active ingredients, have been specially formulated to work with Endermologie, completing the slimming and anti-ageing package.
